

EQUIPMENT HIRE

UPS Systems can arrange hire systems incorporating either a single UPS or Generator, or a combination of both, from periods of a single day to over a year.

NEEDS

We're able to provide a wide range of standby power systems for hire where:

- The customer is in temporary accommodation, for example during premises refurbishment or at an exhibition.
- There are periods of anticipated or planned power interruptions i.e. building works or utility upgrades.
- There are periods of mission-critical activity.
- The load has increased and more cover is required, for example while an upgrade is planned and installed.
- A site evaluation is underway, particularly software integration.
- It suits your particular budget circumstances to hire rather than purchase.

STANDBY EQUIPMENT

Some customers ask us to provide generators on standby, where they are stored on our premises ready for rapid delivery and installation should a need occur.

Typically this would be during temporary site relocation, or for customers with insufficient space for a permanent generator. However we also have customers who, although they don't have planning permission for a permanent generator, do have permission for a temporary generator, in emergency circumstances where power has failed for longer periods than their normal UPS battery life.
